App Store Approval
1 Contents
2
3 This page will eventually collect all the guidelines we recommend for app-store curators.
4
5 The general principle should be that anything that crosses a trust boundary should be checked.
6
7 For now, here are the design documents and wiki pages that are relevant to this topic. This list is not exhaustive:
8
9 • Applications design document\(^1\)
10 • Multi-user design document\(^2\)
11 • Security design document\(^3\)
12 • Sensors and Actuators design document\(^4\)
13 • Geolocation and Navigation design document\(^5\)
14 • Application Layout\(^6\) (the layout, bus names, etc. are constrained, and various system integration points should be checked)
15 • Content hand-over\(^7\) (documents cross the boundary between bundles)
16 • Interface discovery\(^8\) (the interfaces that can be advertised are constrained)
